About this Publication:

Kwax is the wetland expert because this is where he enjoys spending his time. He chats about the great variety of plants growing in the moist areas around and in the waters of the wetlands. As far as biodiversity is concerned, our wetlands are one of the most important biomes. Unfortunately they are almost all under threat, especially those located near the coast. Facto always thought that wetlands were simply muddy pools with plants, but he learns from the Flixies that wetlands are very, very important to people and animals!

Contents Include:

Flixies addresses two very important challenges in our Education System, namely, reading without comprehension and environmental issues. Seven critical Thinking Skills have been identified through which this series endeavours to teach reading comprehension in the intermediate phase.
